TECHNICAL SKILL

- **Frontend Development:** JavaScript, Reactjs, Nextjs, Typescript, Vuejs
- **Backend Development:** RESTful API, Open API, Graphql API, Node.js, Ruby on Rails, MySQL
- **Others:** Hasura, Figma

WORK EXPERIENCE

Frontend Developer | Freelance | November 2022 - July 2023

I developed an educational application for brass bands with Asahi Shimbun using Nextjs and Hasura.
- Developed and released the app with two frontend engineers using Hasura as a backend.
- Heard the requirements from the manager, thought about the database design and created the table.
- Developed auth using AWS Cognito and NextAuth.js package.
- Introduced e2e using playwright to prevent major bugs in production.

Frontend Developer | SIMULA.Labs, Tokyo, Japan | November 2020 - October 2022

I worked as frontend engineer, however since this company only had about four employees, I performed various roles as needed, such as backend engineer, designer and so on.

Web Application for learning programming languages

- Created a UI library as a private package and automatically published it using semantic release

- Created Github Actions that can automatically add icons made with Figma to the UI library, when the designer made original icons.

Web Application for applying job

- Integrated repository that is divided into admin and app and allowed to use common components easily.
- Developed a library to automatically create connection functions from Open API to React(Typescript) and model type to decrease bugs around APIs.
- The specifications of the API changed frequently, and if we dealt with it manually each time, there were many cases where API communication failed, due to a lot of mistakes, so we generated a part of the front-end and back-end code from the Open API to do Schema-driven development.

EDUCATION

Economics Meijigakukin University March 2021
